FOR BEGINNERS

ALYSSA SONG

Snake Plant

These spiky, stiff plants are extremely easy to take care of because they can go up to a month without water. You only need to water it once every 10 days (at most). They can also grow in indirect light.

Keep this plant away from your pets! The snake plant is toxic to cats and dogs.

Pothos

Also known as "devil's ivy", this plant can withstand harsh living conditions. It can grow in the dark and with little water.

Watch out for pale leaves- this means the plant is receiving too much sun, and loss of color variation on leaves means too little.

Air Plant

Originating from central and South America, these plants do not require any soil for its survival. Air plants require light misting once a week (there should not be water dripping down the plant when misting). You can also soak the plant in tap water for 5 minutes every two weeks.

Rubber Plant

This plant is characterized by its unique rubbery textured leaves, and can often be confused as being a fake plant! It thrives in medium to bright light, and should be watered every 1-2 weeks. Allow the soil to dry out during waterings.

Chinese Money Plant

This eye-catching plant is one of the most effective air purifiers. To take care of the plant, keep the soil moist by watering it once a week. The plant grows best under indirect or bright sunlight. Legend says that if you place a coin in the soil of the plant, you will attract wealth in the future.

Where Can I Buy Houseplants?

If you want to shop in-person, you can find these houseplants in the garden center of your local Walmart, Home Depot, or Lowes.

There are also online shopping options (as everything can almost be found online because of COVID). Some gardening sites that sell houseplants include www.thesill.com, www.urbanstems.com, and even Amazon.

Post Your Progress!

Keep us updated on your progress by posting photos of your plants with the hashtag [#houseplantpandemic](#) and tag us [@houseplantpandemic](#)!
